

## Homework Code Assignments

- **Submit** your solution's source code in **zipfile** format (using WinZip, 7-zip, or jar, or whatever).
- Do not include any `.class` files. Do not include any extra directories. Do not include any empty directories.
- Include the **relative path** structure in the zip, **starting with `src`**: then `java`, then the package structure folders:

(this also means that **the package paths are included** under `src/java`)

- Naming the zipfile. Start with "**HW**" for homework (use capital letters), followed by a **two-digit session number** when the assignment was *given out* (not when it's due!). If multiple assignments are given out during the same session, follow the session number with a lower-case "a", "b", "c", etc. ....then an **underscore**, then your **last name**, then an **underscore**, then your **first name**. Your last name and first name should be mixed case (starting with a capital letter if appropriate for your name). If your last name or first name is more than one word, squish the words together or put an underscore between words. The filename must contain **no spaces**. For example:

```
HW01_Hyde_Paul.zip
HW11_VanHalen_Eddie.zip
HW09a_Last_First.zip
```

- **Incorrectly named** zipfiles and/or **incorrect directory structure** in the zipfile shall result in **50% grade reduction** for a homework assignment, and a 10% grade drop for the final project. No points will be subtracted for these infractions on your very first homework assignment.

## Project Submission

- Same as for homework except that there is no session number and the file must start with "**PROJ**" (all capital letters). For example:

```
PROJ_Hyde_Paul.zip
```
